

OVERVIEW

Azotel™ simplifies the business of delivering telecommunications services. We deliver solutions for everything a wireless Operator needs - other than the radio equipment. The Azotel WISPer platform enables an Operator to deliver carrier grade Broadband & Telephony services using a single box platform (Fig 1) seamlessly integrated with an access network such as Canopy from Motorola's Wi4 range or similar.

Simplification is the key to the Azotel approach. By delivering all the technology via single platform and following a prescribed simple business process, we reduce both the cost and the ability for things to go wrong. This in turn enables the delivery of a quality service to your end users.

The **AZESCMFX200** is a standalone SIP Call Manager with integrated billing functionality. It has an analog interface to the public telephony network. It enables the owner to design their own Call Plan and associated billing.

NOTE: The AZESCMFX200 does NOT require any other Azotel products to function.

NOTE: SIP handsets not included.
