

OVERVIEW

Azotel™ simplifies the business of delivering telecommunications services. We deliver solutions for everything a wireless Operator needs - other than the radio equipment. The Azotel WISPer platform enables an Operator to deliver carrier grade Broadband & Telephony services using a single box platform (Fig 2) seamlessly integrated with an access network such as Canopy from Motorola's Wi4 range or similar.

Simplification is the key to the Azotel approach. By delivering all the technology via single platform and following a prescribed simple business process, we reduce both the cost and the ability for things to go wrong. This in turn enables the delivery of a quality service to your end users.

The AZMSK Metro Starter Kit is a bundle of the two Azotel components an Operator requires to start deploying a Metro Mesh/Hotspot type Network.

See COMPONENTS for list of the two individual Azotel components included with AZMSK.

NOTE: AZULWISP100A is a hosted component i.e. the only physical hardware required in the Operators network is AZHIB400.

COMPONENTS INCLUDED

- AZULWISP100A – 100 Users (annual) – Hosted

Fig 1 - Example of Azotel hosted WISPer Servers (AZULWISP100A)

- AZBHIB400 – Hotspot in a Box
