

OVERVIEW

Azotel™ simplifies the business of delivering telecommunications services. We deliver solutions for everything a wireless Operator needs - other than the radio equipment. The Azotel WISPer platform enables an Operator to deliver carrier grade Broadband & Telephony services using a single box platform (Fig 1) seamlessly integrated with an access network such as Canopy from Motorola's Wi4 range or similar.

Simplification is the key to the Azotel approach. By delivering all the technology via single platform and following a prescribed simple business process, we reduce both the cost and the ability for things to go wrong. This in turn enables the delivery of a quality service to the Operator's end users.

The **AZULWISP1000** provides the Operator with a licence key for block of 1000 subscribers on WISPer. Additional licences can be purchased as required.

NOTE: AZULWISP1000 does NOT operate without an Azotel client and WISPer Server e.g. AZBWIB400 and AZRSWISP

FEATURES

- Advanced Core Network Routing** – performs all required traffic routing.
- Bandwidth Management** – performs centrally. Complete flexibility given to Operator in setting uplink/downlink and contention ratios.
- Automated Customer Provisioning** – new customers detected by Azotel software and provisioned accordingly.
